

# SUMIT HATEKAR

## Full Stack Developer — AI & Backend Engineer

Pune, India · sumithatekar9@gmail.com · +91 7387155502 · github.com/sumit1456 · linkedin.com/in/sumit-hatekar123

### Profile Summary

Full Stack Developer focused on building web applications and AI-driven document systems. Experienced in developing REST APIs, RAG-based workflows, and document generation tools using Java/Spring Boot and Python/FastAPI. Interested in backend engineering, scalable systems, and clean application architecture. Passionate about building reliable software with strong performance and user-focused design.

### Technical Skills

**AI & Data:** LangChain, RAG, Pinecone, LLM Integration, Semantic Search

**Languages:** Java, Python, JavaScript (ES6+), SQL, HTML5, CSS3

**Backend:** Spring Boot, FastAPI, REST API Design, Spring Security (JWT), Redis Caching

**Frontend:** React, Redux, PixiJS (WebGL), Canvas API, UI/UX Design

**Testing:** JUnit, Vitest, Cypress (End-to-End)

**Cloud & DevOps:** Docker, GitHub Actions, AWS (EC2, S3, Load Balancing), Netlify, Render

**Databases:** PostgreSQL, Oracle SQL, Hibernate, Spring Data JPA, Database Indexing

### Experience

#### Backend Developer — Deadstock Inventory System

2025 – Present

College Client Project (Institutional Commission) · Team Project

- Built a Spring Boot backend to manage and track inventory items and assets for the college administration.
- Developed paginated REST APIs for efficient searching and filtering of inventory records.
- Collaborated with teammates to integrate backend services with the frontend and optimise database operations.

#### Full Stack Developer — MRB Exam Management Portal

2025 – 2026

On-the-Job Training (OJT) · Team Project

- Developed core backend features using Spring Boot, including secure student registration and automated result generation.
- Collaborated with team members across frontend and backend, contributing to both React UI components and Spring Boot APIs.
- Improved data retrieval performance using Redis caching, reducing repeated database load.
- Set up CI/CD deployment workflows using GitHub Actions for consistent and reliable updates.

### Projects

#### PDF Editor App — AI-Driven Document Studio [Live Demo]

Dec 2025 – Present

- Used Python and FastAPI to extract text, images, and layout information from PDF files into structured JSON data.
- Integrated a LangChain-based AI assistant that allows users to edit document content using natural language commands.
- Built a semantic search workflow using Pinecone to locate and update specific text blocks within PDF documents.
- Designed a PDF rebuilding system using Google Fonts while preserving the original document layout and formatting.
- Implemented an automated cleanup process to remove expired session data and reduce storage usage.
- Implemented coordinate mapping logic to place AI-generated updates accurately within PDF pages.

#### ResumeMaker Pro — GPU Accelerated Editor [Live Demo]

Sep 2025 – Dec 2025

- Built a resume builder using React and PixiJS/WebGL for smooth real-time graphical editing.
- Developed a hybrid rendering approach that keeps text in the DOM to maintain ATS-friendly resume output.
- Developed Spring Boot backend services to generate searchable PDF documents from user data.
- Managed multi-page layouts and responsive rendering across different screen sizes and browsers.
- Ensured exported PDF files remained searchable and visually consistent with the editor preview.

### Education

#### Master of Science in Computer Applications

2025 – 2027 (Expected)

Savitribai Phule Pune University — First Semester: 89.63%

### Certifications

Java Full Stack Development — QSpiders Wakad (2024)
